

Getting Errors generating User reports

Posted by smartin - 09 Nov 2011 21:51

We are getting the following error after applying the 1.21 patch

Fatal error: Class 'SocialAnalyticsConfig' not found in
/home/hpsocial/public_html/sharesafe/administrator/components/com_socialanalytics/views/report/tmpl/layout8.php on line 186

The following report is one of several we get it on "Users: Top Users, by Views (on Last Login)"
"

See attachment.

Thanks!

Dear friends,

It seems there is an issue with this patch. You can safely remove line #186 at layout8.php.

The one that says:

```
$config =& SocialAnalyticsConfig::getInstance();
```

Because these values are loaded before in the code.

We'll release an updated version to work the issue out.

Kind regards.
