Getting Error with SOCIAL ANALYTICS after install Joomla 2.5.4

Posted by gummer - 11 Jun 2012 21:39

Joomla 2.5.4 and Jomsocial 2.6.1

Installed and says its version 1.1.2 - is that correct? I just downloaded the product and thought it was the latest version.

When I go to Components->Social Analytics I get the following error:

Fatal error: Cannot make static method JRegistry::getInstance() non static in class SocialAnalyticsConfig in /home/psncorp/public_html/demos/hospital/administrator/components/com_socialanalytics/classes/settings.php on line 16

Any ideas?
