Location Breakdown
Posted by 53dn - 29 Jan 2014 15:56

_____

Hi,

We have two separate stores on Magento - i would like to be able to view where our orders are coming from but more so that the country, i would like to know what county they are coming from for example - london/leeds/dublin/galway etc. Are you able to provide that further location breakdown or is it just by country?

Thanks

Hi 5DN,

Thanks for your interest in our products.

At this moment it is just by country, but plans are to provide further location breakdown by also county and city. It's one of our most popular user requests, and we'll start working on this one probaly next week.

This week we'll release a new version that includes reports by Payment Method. We're always working to enhance the tool.

Kind regards, and thank you for the feedback.

Ok great, do you know when you will have the location breakdown finished and ready to use? If you could let us know we would be interested!

This one is a little hard to tell, because somehow it breaks the usual operation of the tool (those ones would be as sub-reports inside other reports).

I guess we'll know more about the timing once we start developing.

If you want, I let you know how it goes. We'll start next week.

Hi folks...

is there any update on this facility???? Its really required.

Australia is a big place, and order location: Australia doesn't mean much....

Of course, the same applies to every other country.... people in England wouldn't have much use for simply, Location: England.
