Get Child category from Parent & Multilingual problem

Posted by crotondo - 18 Jan 2013 11:33

Hi,

We have a shop with several child for each parent and only the parents are categorized so childs don't appear on category view.

In SA when I want to get data for categories I get nothing. Is there a way to show sales from categories linking childs to their parents category?

Also get problem with multilingual shop getting reports form PRODUCT tab. Every product appears twice, one in spanish and again in english. Shouldn't SA get the data from product id instead of product name?

Thank you.

Did you ever get any help with this? I have the same problem.

Thanks

Andre
