_____

Hello

Just bought your component and it looks great.

Just some small features missing that would be nice to see:

Already a user mentioned this and myself too in the past.

- Sales by province, state or city. In our case province will do.. Thats a really usefull information for us.

- New clients... just the new clients registered in Virtuemart would be cool if we could extract that info from your component.

- Shopper groups, thats a great addition but would be nice if we could extract the orders with the clients and showing the shopper group for each one too, maybe from the sales tab. Right now is fine but too general.

Really like this component but it lacks of updates more often, although I understand the hard work it must be.
