CSV Import?
Posted by torin - 07 Jan 2011 23:50

_____

Is there any way to use this for generic sales info, and not tie it to Virtuemart?

I m currently using ecwid, and would like to us ethe information generated from the store to visualize reports. The only way I can do this is by exporting CSVs

I'd love to import them using your software to analyze the data.

Possible?

Hi torin,

At the moment Sales Analytics only works with VirtueMart, but we dessigned it in such a flexible way to be able to incoporate other Joomla! e-commerce solutions.

If you tell us what e-commerce solution you use, we can start researching how to to incorporate it into Sales Analytics. We believe that will be a better solution than including CSV imports (and it'll be easier to use also, considering all the report displaying possibilities).

Kind regards,

César Revert.
