Include virtuemart custom fields in reports?

Posted by loppan - 27 Dec 2015 14:04

Hi,

I was using Sales Analytics for Virtuemart back in 2011 and I loved it, now I'm thinking about starting to use Virtuemart again and I'm happy to see that this wonderful extension is still around

Anyways... Since I didn't see this mentioned anywhere, I wonder if Sales Analytics have any kind of support for custom product fields? For example, I have the cost price (the price I pay my supplier for my products) as a custom field to all my products. It would obviously be nice to not only see how much I've sold for during a certain period, but also how much these products costed me to purchase. This way I can measure my profits with high precision, day by day.

Curious to know if this is already supported - or if anyone else would think this is a good idea to add at some point

Best wishes

Peter
