Component does not work

Posted by teejaygirl818 - 19 Nov 2011 04:49

Hi Team:

As is, the component is not working. It does not work in 1.7 and I tried it on a 1.6 site and it does not work there either. So I look at the code and there are an empty file. No code at all. That is why it doesn't work.

I am attaching the form of the component I received in the download, in case there was a mistake. Hope you can fix this...
