_____

Hi

How can I get individual User Stats analytics on users profile?

Hi Mark,

On the other message you've sent us about about this feature you talk about displaying individual stats on their profile, and you mention uploaded/linked video, Music and Photos. What do you mean?

Every use get to see in their profile how many videos, photos, friends or groups they have uploaded, linked and joined. What kind of additional information do you need there?

Besides, Social Analytics is a time-based reporting tool (much like Google Analytics) that displays information in three different layes, including a graphical display. There's no so much room in the user profile.

If you tell us exactly what you need, we can tell you what can be done.

Regards.

_____

Hi, thank you for getting back to me.

My site is built to help artist showcase their work, once an artist post their media I spend my time shearing their individual media ie Videos, Photos, Music, over a variety of outside video and social networks as links.

"...uploaded/linked video, Music and Photos. What do you mean?"

On my site Each member has a profile ex: [inartmedia.com/index.php?option=com_comm...=1669&amp ;Itemid=194](inartmedia.com/index.php?option=com_comm...=1669&Itemid=194)

each profile has ...

1. "PROMOTIONAL : Covers + Production Stills + Posters"

2. "PROMOTIONAL : Events + Gigs + Premiers + Screenings"

3. "PROMOTIONAL : Interviews + Movie Trailers + Music Videos"

4. "PROMOTIONAL : Music"

Is their a way to "create a button" on "members profile" for each individual member that will display "individual stats" of each of the "4 types of media" listed above?

Also I notice the stats are only available from the admin back-end, is their a way to view all stats from the front-end in the main navigation?

Thank you
