

Can a report be run from Joomla Front end?

Posted by WISR - 06 Dec 2011 18:09

Pre-Sales Support,

We need a system to allow a registered user to view a "List of Members" with:

Name, Address & Ph#, from the Joomla front-end.

Can your "Reports" system be configured to provide such a list?

Thanks

CRS

Hi WISR,

The kind of feature you request is more a list than a report. Social Analytics is designed to process (usually) numeric data and display it in a usable graphic report layout.

I'm sorry, but you'll probably have to look for a more suitable tool. There must be a better one available.

Regards.
