

Sales Reports Are Incorrect!

Posted by Bluesky95 - 04 Dec 2014 21:47

I recently had my developer install the sales analytics extension, and the sales data is completely off. In fact weekends show \$0 in sales for whatever reason.

I tried emailing support, however it has been about a week and I have yet to receive a reply.

Can someone please let me know how to configure this extension, so my analytic reports are accurate.

Thank you
