Order Taxes Report Grouped by Tax Rate

Posted by Teo - 25 Jun 2014 12:36

Can I see a screenshot of “SALES ANALYTICS for MAGENTO” Tax report?

I simply need a report like the Magento default “Order Taxes Report Grouped by Tax Rate” but with additional columns: net income and/or gross income.

Hello Teo,

Thanks for your interest in our products.

We really appreciate your feedback, it help us improve our products.

At this moment Sales Analytics does not include this type of report, but we will introduce it in a new release as we believe it can be very useful to some of our customers.

Once it is ready, I'll let you know.

Kind regards, and thanks again for the feedback.

Thanks for your answer.

I think that many italian Magento users need it because it is a mandatory report from a 1972 law (it.wikipedia.org/wiki/Registro_dei_corrispettivi
) for many merchants, but may be they have other software to manage it.

A report sample found online:
