Using virtuemart 1.4

Posted by Altshop - 02 Feb 2011 11:37

Using virtuemart 1.4 and admin Analytics is all messed up. The buttons don't work and it is all a mess. the menu is all the way at the bottom and does not work.

Why could this be? does it have anything to do with that i use virtuemart 1.4 or joomla 1.5 with Legacy activated?

Hi Altshop,

The issue you mention doesn't seem to be related to VM1.4. It looks like a layout issue, nothing to do with DB data.

In order to work it out, can you send us an screenshot to info@latitudweb.com ?

Kind Regards.

Hi Anders,

The only issue seems to be that the css file (that that defines the styles and the layout) and the javascript file (that that handles the buttons behaviour) have not been correctly loaded.

That css file is located here: **/administrator/components/com_salesanalytics/assets/css/report.css**

And it's loaded on the **/administrator/components/com_salesanalytics/views/report/tmpl/layout.php** file, line #89:

```
$document->addStyleSheet(DS.'administrator'.DS.'components'.DS.'com_salesanalytics'.DS.'assets'.
DS
.
'css'
.
DS
.
'report.css'
)
;
```

While the javascript file is located here: **/administrator/components/com_salesanalytics/assets/js/report.js**

And it's loaded on the **/administrator/components/com_salesanalytics/views/report/tmpl/layout.php** file, line #88:

```
$document->addScript(DS.'administrator'.DS.'components'.DS.'com_salesanalytics'.DS.'assets'.DS.'js
'
.
DS
.
'report.js'
)
;
```

Do those files exist on your installation? Or maybe are you using a diferent adminitrator path?

Kind regards.

I found out that the code was trying to find the files in administrator within the administrator. So i changed the code to:

$document->addScript('components'.DS.'com_salesanalytics'.DS.'assets'.DS.'js'.DS.'report.js');

$document->addStyleSheet('components'.DS.'com_salesanalytics'.DS.'assets'.DS.'css'.DS.'report.css');

on the /administrator/components/com_salesanalytics/views/report/tmpl/layout.php file, line #88 and #89:

And now it works perfectly

I'm glad to hear that.

We have thoroughly tested the component and did not find this issue (and neither any of our users have reported it), so it could be related to the Joomla version you are using or the Legacy mode.

I post this information here in case it's useful to any of our users.

Kind regards.
