

Help with a simple report

Posted by alex - 17 Sep 2012 15:16

We've recently developed an e-commerce Joomla site for a client and have incorporated Sales Analytics into the site. The client has asked us if he can run a report which lists all the products he has entered onto the site along with the price and the amount that he has in stock. Basically it's very similar to the 'List Products' facility in VirtueMart but the client wants to be able to export the data into an Excel file. I've had a look at the Products and Inventory sections of Sales Analytics but none of the reports seem to fit the bill.

Any help would be greatly appreciated.

TIA,

Alex

Hi Alex,

Thanks for your interest in our products, and for your feedback.

The report you suggest seems an interesting one, we'll include it in a new release.

Kind regards.
