What about product that are being viewed only by customers?

_____

Hi,

I was curious if this nice looking reporting tool for Virtue Mart also tracks down products that are being viewed only by customers. I haven't seen this feature in the demo. What I could se was a very wide array of statistics about sold products. I'm eager to see what productpages are opened and how many this occurs.

P.s. I'm not interested in the answer that products can be tracked down that are put in basket only, without being sold. I know this is possible.

Like to hear it, thanks in advanced.

Gr. Alex
